

# 2021 ONSE BAROMETER

## 1. Electrical installations in housing units

37,2 million housing units on the 1<sup>st</sup> of January, 2021

20,5 million

single housing units

16,7 million

multiple housing units

More than 30 million date from pre 2006

# 85 %

of electrical installations over 15 years old have at least one electrical deviation

Among the electrical deviations found, the main ones are :

Faulty earth connection

Outdated or unsuitable electrical installation devices

Risk of direct contact with live parts

Incorrect protective device use

Incorrect equipotential bonding

Bathroom/Wetroom electrical security zoning not respected

Source : Analysis of mandatory Electrical Diagnostics

## Did you know ?

The newer the property (or more recent the renovation) the greater the reduction in the number of deviations.

The founding members of ONSE are Consuel and Promotelec with the support of Fase.
