

2021 ONSE BAROMETER

2. Electrical installations in common areas of multiple housing units

37,2 million housing units on the 1st of January, 2021

including 16,7 million multiple housing units

Source : IFOS/ONSE

90 %

of electrical installations in common areas have at least one electrical deviation

Among the electrical deviations found, the main ones are :

Risk of **direct contact** with live parts

Risk of **indirect contact** with live parts following an insulation fault

Circuit breakers or fuses rating **unsuitable** for the circuits to be protected

Main circuit breaker **location problem**

Source : Analysis of electrical diagnostics carried out by an independent organization

Did you know ?

There is no mandatory Electrical Diagnostics for common areas.

The founding members of ONSE are Consuel and Promotelec with the support of Fose.
